

Innovative Service Solutions Is Taking The Health, Safety And Welfare Of Its Clients To The Next Level By Minimizing Exposure To Deadly Germs

For Immediate Release

ORLANDO, Fla./EWorldWire/Feb. 13, 2006 --- Innovative Service Solutions, (ISS) an Orlando-based mechanical service company has partnered with Philders Group International Inc., a leading healthcare consulting firm, to reduce the exposure risk of its clients to Methicillin Resistant Staph Aureus (MRSA) and Vancomycin Resistant Staph Aureus (VRSA). To accomplish this, ISS is implementing a comprehensive Infection Control Policy and Procedure as a part of its Safety Program.

"This is not a standard part of any safety program today in the Heating, Ventilation Air-Conditioning (HVAC) mechanical industry, but should be," said Richard Bodwell, president and CEO of Innovative Service Solutions. "With the advent of exposure to air-borne pathogens and new disclosure laws for Healthcare Acquired Infections (HAIs) for medical facilities, we knew it was critical for our clients' well-being to take an aggressive proactive measure. We hired a medical expert in the industry to assist us in addressing this very serious need."

MRSA and VRSA cause some of the deadliest HAIs today, and ISS is meeting its clients' needs by proactively implementing its Specialized Technical Awareness Team (S.T.A.T.) and ViceVRSA programs as a part of its corporate core competency.

S.T.A.T. is a comprehensive tiered educational program to educate specialized trained technicians about HAIs and the environmental and exposure impact it has. Technicians must pass all levels of education, maintain mandatory continuing education, as well as learn about how to recognize suspect areas for exposure.

The ViceVRSA program provides containment, measures and safety protocol critical to risk reduction for exposure in the healthcare environment.
