

Web Risk Manager Lands Hyatt Hotels

Top rated Internet Property Risk Management Information System Company adds another Marquee client

For Immediate Release

OAK BROOK, Ill./EWorldWire/April 7, 2004 --- Since Aon/Schirmer's recent engagement of Web Risk Management to be involved with its business accounts, another successful outcome has resulted with Hyatt.

Web Risk Manager(TM) will be rolled out globally over the next few months to address the hotel's hospitality risk.

"We are very excited about our implementation in Hyatt's Risk Management Program," remarked E. J. Zinnecker from Web Risk Management. "The company has been noted in the industry as a leader in risk management."

Web Risk Manager continues to attract very large property accounts that want to manage their property risk management information at any time - 24/7/365. The Web Risk Manager product is gaining acceptance with insurance markets that want access to risk systems more frequently than the during the renewal period each year.

Web Risk Manager enables underwriting groups access to key risk improvement areas of the web portal as well as updated core risk information for more accurate pricing of premiums. Web Risk Manager appeals to property risk control personnel because of ease of setup and digital management of critical risk improvement data for the client.

Because it returns control to finance and risk management departments, Web Risk Manager is gaining acceptance by Fortune 1000 and large privately owned national and international companies that want to effectively manage their property risk management program globally.

Web Risk Management works with large insurance brokers, insurance carriers, risk management consultants and directly with companies that need to address insurance and risk management issues.

Quite recently, companies have addressed the Sarbanes-Oxley Act as another reason to use the Web Risk Management product.

The business environment and expensive hard market of property insurance has impacted the need for independent management of critical risk management information over the past few years, and the need is expected to continue for some time.

Web Risk Manager is the leader in enterprise property risk solutions for large national and international companies. Web Risk Management, Inc. (www.webriskmanagement.com) is headquartered in Oak Brook.
