

Resolution Integration Solutions Inc. Announces The Next Generation In Enterprise-Wide Production Execution And Performance Systems: Resolution 5.2

Resolution Integration Solutions Inc, announces the release of Resolution 5.2 with extended features and functionality marking a new standard in enterprise-wide production execution and performance-monitoring systems.

For Immediate Release

SOLON, Ohio/EWORLDWIRE/Oct. 4, 2004 --- Resolution Integration Solutions Inc. announces the release of Resolution 5.2 with extended features and functionality. The release marks a new standard in enterprise-wide production-, execution- and performance-monitoring systems. Resolution is a comprehensive, Web-based plant information system with specific business solutions for the chemical, petrochemical, gas processing, refining, food and process manufacturing industries. Resolution integrates data spread throughout an enterprise to provide solutions for tough business issues such as production management, reconciliation and mass balancing, laboratory data management, key performance indicators, batch and lot tracking, and plant performance monitoring.

The Resolution product line is comprised of the Resolution business solutions, the RISnet Web GUI, the Repository data warehouse and the Relayer messaging system. These modules work in concert to deliver an integrated enterprise. The 5.2 release of Resolution includes:

- RISnet fully interactive Web interface allowing both view and data entry
- Multi-language support - Projects are currently underway in English, Polish, Korean, Chinese and Spanish.
- Rapid application builder - enabling the quick configuration of complex applications
- Major enhancements to all Resolution solutions in production management, reconciliation, laboratory data management, operating instructions, operator log books, key performance indicators, batch and lot tracking, plant performance monitoring, and mass balancing
- Resolution Repository database enhancements that include extended modeling capabilities, allowing the same database design to be used for a wide range of plant-management applications and solutions

Resolution provides for the integration of all plant MES data and applications, including operational, economic, engineering, planning, maintenance and documentation. This provides one-stop shopping for data, and it eliminates data ambiguity and duplication through close integration with other systems. Incremental implementation of Resolution guarantees a rapid return on investment.

About RIS (www.ris-resolution.com)

Founded in 1996, RIS is a leader in providing application integration solutions to the process industries based on the Resolution product, whose goal is to reduce the effort to integrate plant data and applications. Resolution is revolutionary in its approach yet evolutionary in its implementation. It can be implemented for an entire facility or in one business area at a time, and it has the capability to be dynamically configured to match changing user business processes.
