

NSAB-SIRIUS To Provide Satellite Capacity To Icomera's Wireless Onboard Internet Solution For Trains

FOR IMMEDIATE RELEASE

GÅrteborg, Sweden/EWORLDWIRE/April 15, 2003 --- Icomera AB, a wireless data communication company, and Nordic Satellite AB (NSAB-SIRIUS), a leading supplier of satellite services in Northern Europe, today announced a strategic satellite communication agreement.

The agreement will have NSAB-SIRIUS providing satellite capacity in their territory to Icomera's Wireless Onboard Internet solution for trains.

The deal opens up a new market for NSAB-SIRIUS by providing satellite capacity to trains through Icomera's Wireless Onboard Internet solution. Icomera's revolutionary new solution is a total end-to-end wireless Internet communication system for train operators; including all hardware, software and communication channels using satellite for broadband capacity and multiple GSM links in parallel for reliability.

Michael Johansson, CEO, Icomera AB comments: "We are establishing a club of key partners who are leaders in their industry and whose services strengthen the solution - Wireless Onboard Internet. NSAB-SIRIUS is such a company, recognised as a premium European satellite communication provider. We are delighted to announce this union between our companies that will ensure a leading position for us going forward."

CEO of NSAB-SIRIUS, Lennart Hallkvist, says: "Icomera is the first company in the world to successfully deliver real-time wireless Internet access onboard trains. We are very excited to be a key partner to Icomera and play our part in ushering in a new era in train travel."

The recent commercial agreement between Linx, a Scandinavian train operator and Icomera to fit their high-speed trains with Wireless Onboard Internet will mean that NSAB-SIRIUS will begin supplying satellite communication to all their trains fitted with the solution.
