

## HoneyPoint Security Server Upgrade and New Features Available

*MicroSolved, Inc. is pleased to announce the general availability of HoneyPoint(TM) Security Server version 1.50.*

For Immediate Release

COLUMBUS, Ohio/EWORLDWIRE/Jan. 24, 2007 --- The new release, an update of the HoneyPoints themselves, adds the much requested capability to ignore specific hosts such as network scanners and other known sources of network traffic that in the past would trigger unneeded events.

"Customers were so excited about the ignore capability that we have been demonstrating for them in the coming 2.00 product release, that we decided to back port that capability to the 1.XX series of HoneyPoints. This is a large advance for further reducing false positives and maintaining our industry-leading position as the simplest, more powerful way to secure network deployments," said Brent Huston, CEO and Security Evangelist of MicroSolved. "Clearly, with the coming 2.00 release, we will further establish our emergence as a dominant security technology and easily demonstrate what customers have been telling us - that this is simply a better way to do organizational intrusion detection and security."

For details on obtaining the 1.50 upgrades and/or to discuss the coming 2.00 release, contact a MicroSolved account executive.
