

MicroSolved Announces HoneyPoint Security Server 2.00 and New Features Available

MicroSolved is proud to announce the general availability of the newest release of their acclaimed HoneyPoint Security Server. This new edition brings new features and flexibility to its industry leading intrusion detection system.

For Immediate Release

COLUMBUS, Ohio/EWORLDWIRE/May 22, 2007 --- MicroSolved, Inc. is pleased to announce the general availability of HoneyPoint(TM) Security Server version 2.00.

The new release brings new capabilities to the product including a database back-end with complete event management, tighter integration with existing SIM installations and a plugin interface to further allow customers to develop their own extended capabilities.

"The 2.00 release demonstrates a clear way forward for HoneyPoint and internal network intrusion detection. Now clients can fully manage security events without the false positives and high maintenance needs that other IDS tools require," declared Brent Huston, CEO of MicroSolved, Inc. "HPSS 2.00 truly reaffirms our commitment to the product and its development, long-term. Clients have been so pleased with the capabilities and results of using it that we are thrilled to bring new features, deeper HoneyPoints and extreme flexibility to the market with this release. Once organizations see the power of this tool and the simplicity of its deployment and management, they are incredibly moved to get it into their environment," Huston added.

For details on obtaining the 2.00 upgrades and/or to discuss the product, contact a Micro-Solved account executive.
