

ADC AUSTIN

Long Awaited Web Client For CA Plex On The Market In December, 2007, Reports ADC Austin

ADC Austin and Websyidian have joined forces in developing Websyidian Web Developer+, which includes a long awaited Web Client for CA Plex.

For Immediate Release

AUSTIN, Texas/EWORLDWIRE/Sep. 20, 2007 --- The new development tool enables CA Plex development shops to make direct HTML deployment of existing applications without development, as well as deployment of new applications in a standard J2EE Web server environment.

With the product comes a set of advanced patterns to perform sophisticated HTML templating and to integrate seamlessly with Web services and features like mapping software or JavaScript.

Mikkel Schnack, sales and channels director of Websyidian, says: "Plex is a great model-based development tool, and for some years now the market has been demanding a Web Client for Plex. So when ADC approached us with an idea to join forces, we saw this as an opportunity to meet this demand and enable Plex shops to make applications accessible from the Web."

John Rhodes, principal architect and president of ADC Austin, continues: "We are very pleased with Websyidian Web Developer+. Plex developers can gain full access to the Web for their applications, and it also supports CA 2E applications that have been migrated to Plex via the ADC Modernization Studio. 2E shops that are targeting SOA strategies with IBM Websphere or Tomcat can especially benefit from this technology."

Websyidian Web Developer+ is in beta with select partners, and it will be generally available in December 2007 through Websyidian, ADC Austin and a network of Websyidian and CA partners world-wide.

ADC Austin was established in 1996, and today the Austin-based company employs a team of professionals across three states. ADC Austin has been working with solution development and modernization within 2E and Plex for many years - from the days of Synon and AS400 to today's CA 2E and Plex, Microsoft .NET, and IBM System i /Rational/Websphere. Clients include medium to large development shops across all industries.

Websyidian has provided web development tools to the CA Plex and IBM System i market for 10 years, and the company has been in the solution market for more than 20 years. Websyidian products are developed on this experience, best practices and user feedback. Today more than 200 companies in 35 countries worldwide use Websyidian Web application tools.

Both companies are CA Smart certified and IBM business partners.

Websyidian products hold the following IBM certificates: IBM ServerProven, Built on IBM Express Portfolio, IBM Galaxy Program, System i5 Security & Compliance Proven.
