

PHOTO AVAILABLE: Armor Healthcare Takes Off With Gloves In Three-year, Multi-million Dollar Agreement With Leading Mid-West Infection Control Company

For Immediate Release

MINNEAPOLIS/EWORLDWIRE/Oct. 8, 2008 --- Very few companies can boast of landing a \$7,000,000 contract in the first year of operations, but Armor Healthcare can. The corporation today announces that a leading mid-west company in the infection control market has agreed to purchase \$7,000,000 worth of private label medical gloves over the next three years.

On the eve of a one-year anniversary on October 22, Armor Healthcare's CEO Bob Simmons says Armor Healthcare is perfectly poised to deliver on a supply commitment for medical gloves, considered a required tool in an arsenal of infection control products and materials.

While Armor Healthcare has been pursuing business across a range of industries, the company has also applied its ingenuity to create the patent-pending Classroom Caddy(TM) - a turnkey education system to help schools reduce germs. The system is designed to make infection control products and proper use readily available and accessible in the classroom environment. The final prototype and informative Web site ('<http://www.ArmorHealthcare.com>') are in the last stages of development.

Armor Healthcare currently offers a complete education system in its Classroom Clean Essentials(TM) line of products for elementary, middle and high schools. The minimal expense balanced against reduced absenteeism - up to 53 percent - for students and faculty offsets the cost of the program within the first year. Reduced fear of "Superbugs" like MRSA, increased students' test scores and higher reimbursement rates by States make this a win-win for all parties involved.

"No one denies the growing need for adequate product supply to address all forms of germs, bacteria, infections and mutating forms of disease," said Simmons. "This business arrangement, along with others, strengthens our ability to move forward to develop additional lines of business."

Armor Healthcare during its first year had already recognized over \$2,400,000 in business. "Our foundation is solid, and we are reporting positive net earnings," said Simmons.

Armor Healthcare's product lines of private label medical gloves and infection control products for the healthcare and education markets are designed for ease of use, and they meet or exceed the highest standards of quality. Armor specializes in high risk, chemotherapy-rated, National Fire Protection Agency-tested medical grade gloves. Armor offers a full range of logistic services for delivery of containers from its overseas' manufacturing partners. Services extend beyond the moving of containers, to helping distribution partners build their brand and increase their revenue through a range of sales, marketing, training and logistic services. Armor Healthcare is pursuing additional funding in return for equity from a solid strategic partner.
