

Liquid Technologies Releases New Freeware XML Studio And Silverlight Code Generator

For Immediate Release

BRADFORD, West Yorkshire United Kingdom/EWORLDWIRE/Jan. 5, 2009 --- Liquid Technologies Ltd (<http://www.liquid-technologies.com>) is pleased to announce the latest release of its free graphical XML development environment, Liquid XML Studio 2009.

Liquid XML Studio 2009 extends and improves on the existing functionality by introducing other new tools and technologies that our users have requested in order to continue to make Liquid XML Studio the best value XML development environment available, and include:

- Silverlight code generation, which has been added to the Liquid XML Data Binder to generate code for Silverlight 2.0 in both C# and VB .Net, and includes new Runtimes for these new platforms.
- An XML differencing tool, allowing users to easily compare two XML files in a graphical view and includes advanced filtering options.
- Liquid XML Studio Project files, allowing easy access and grouping of all the files being worked with.
- XSLT support, allowing XSLT files to be run within the editor to generate the XML output file from source XML data and transform.
- Enhanced printing and previewing of XML Schema diagrams, allowing scaling of the diagram to a percentage height/width or to a fixed number of pages high and wide. This significantly improves the ability to view large schema in a printed form.
- Improved large file support, allowing larger files to be edited within the XML text editor.
- Fast Infoset (FI) support, allowing binary compressed files to be imported and exported directly from the Liquid XML Studio. This technology provides huge performance improvements as the FI files can be read and written very quickly by FI enabled parsers (such as the Liquid Fast Infoset Library).

Liquid XML Studio 2009 is available in three editions:

Freeware Community Edition

- Fully functional product for commercial and non-commercial use
- Graphical XSD Editor
- XML/WSDL/XDR/DTD/CSS Editors
- Web Service Call Composer
- XPath Expression Builder
- XSLT Editor

Designer Edition

- Integrates with Microsoft Visual Studio 2005 & 2008, adding a Graphical XSD Editor, Web Service Call Composer and XPath Expression Builder to the Visual Studio environment

- XML Differencing Tool
- Full support for XML Schemas with include/imports
- Branding can be turned off
- No limits on XSD Document generation
- Projects can be saved
- 12 Months Email Support

Developer Edition

- XML Data Binding (XML Code Generator) for Cross platform C++, C# 2003, 2005, 2008, Java, Silverlight 2.0 (C# 2008 & VB .Net 2008), VB.Net 2003, 2005, 2008, Visual Basic 6.0
- Royalty-free distribution of compiled code and the Liquid Runtime to end-users
- Fast Infoset Support in C++, C# and VB .Net
- HTML Documentation Generation for the Generated Code Library
